ABOUT ME

Second-year B.Tech Computer Engineering student with a strong interest in software development and problem-solving. Proficient in Java and Python, and currently exploring Machine Learning and Natural Language Processing. Eager to apply technical skills to real-world projects and continuously learn emerging technologies.

CERTFICATIONS

UDEMY

Java Bootcamp: Learn Java with 100+ Java Projects — Feb 2026

Completed a comprehensive Java bootcamp focusing on core Java, object-oriented programming (OOP), data structures, and problem-solving through 100+ hands-on projects. Gained practical experience in building real-world applications and strengthening programming fundamentals.

PROJECTS

MINI PROJECT

Blackjack Game Simulator (Java)

• Developed a console-based Blackjack game implementing core game logic and rules
• Applied object-oriented programming concepts such as classes, inheritance, and modular design
• Designed dynamic card handling, score calculation, and user interaction system
• Improved problem-solving skills by implementing game flow and edge-case handling

ONGOING PROJECT

Origence – NLP-Based Assignment Plagiarism Detection System

• Developing an AI-based system to detect plagiarism by comparing textual similarity between student assignments
• Implemented NLP techniques such as TF-IDF, n-grams, and cosine similarity for accurate comparison
• Designed backend modules for automated text extraction and preprocessing from PDF documents
• Focused on improving detection accuracy and handling paraphrased content effectively
